# Overview

Cryptocurrency absolutely keeps growing everyday. There are many cryptocurrencies that can be used for an investment. However, you might have to know that crypto assets are well known by the investors as stablecoin, altcoin, memecoin, and shitcoin. Cryptocurrency is devided into 2 categories, namely Coin and Token. Both coin and token basically have the same entity, but those have different basic types of blockchain network. Coin is crypto asset that has its own blockchain network, such as Bitcoin, Ethereum, Cardano, Doge, and more. While token is crypto asset that resides on its own blockchain network, such as Shiba Inu, ADP, AXS, etc. In this topic, all of those things will not be discussed, we only discuss about Meme coin.

## About Memecoin & NFT?

Meme coin is cryptocurrency inspired by meme and internet jokes. Essentially, cryptocurrency and memecoin are ussually not taken seriously but it sometimes attracts many investors to buy or take part in the latest jokes. After meme coin becomes popular and its value goes up, investors frequently follow the trend and raise a coin price in the market. Meme coin tends to be more fluctuating than the main cryptocurrency like Bitcoin (BTC) and Ethereum (ETH). The reason might be because memecoin is community supported token. Memecoin price is usually affected by social media and online community sentiment. This brings not only many hypes, but also FOMO (fear of missing out) and financial risk. Nevertheless, memecoin can go down unexpectedly when the sellers turned their attention to the next meme coin.

The example of popular meme coin is DOGE coin. This coin was launched in 2013 as a parody, DOGE is inspired by popular meme DOGE, Shiba Inu dog from Japan.

Another characteristic of meme coin is its unlimited stock. For instance, Siba Inu (SHIB) has 1 quadrillion tokens stock, while DOGE has unlimited stock with more than 100 billion tokens on the market. This is because meme coin does not have coin burning mechanism, and plentiful stocks define its relatively low price. Therefore, If you buy it for only \$1 USD, you will get millions of meme coins.

The point you should know that we develop different meme coin/ token from the existing one. Our meme token is called HOBBIT PIRATE (HTP).

In other words, HTP is different level token because it is not only as meme token, but also as other fuctions. These fuctions will be the difference from the existing meme token.

## Why should be Hobbit Pirate (HTP)?

Hobbit Pirate, with HTP symbol, is a meme token inspired by a fan-made story of the crossover film between The Hobbit and The Pirates of Caribbean in which those well-knowns films have a lot of fans. This film fans community are expected as HTP token holders together with cryptocurrency activists, especially meme token.

As we said before that our HTP token is a meme token that has different level from the existing meme token. HTP token is not only as meme token, but also has more value where HTP token can make more benefits than just meme token.

HTP token has features that other tokens do not have, and these features give opportunity for HTP token holders to make more benefits.

The features of Hobbit Pirates are:

- **Trade (Swap & LP Pool)**

Hobbit Pirate apart from being a meme token (HTP), it is also a decentralized exchange platform for exchanging BEP-20 tokens on BNB Chain network.

Hobbit Pirate exchange is an Automated Market Marker (AMM) where users can exchange two tokens that are already on Binance Smart Chain.

Liquidity provided for the exchange comes from Liquidity Providers (LP) who stake their tokens in Liquidity Pool. As users, they will obtain LP tokens that can be staked to get HTP tokens in the Farm.

When users do tokens exchange (trading), 2% trading fee will be charged and the distribution is as follows:

Buy HTP tokens: 2% of SWAP will be added to Liquidity and 2% is recycled and 2% is burned.

Sell HTP tokens: 2% of SWAP will be added to Liquidity and 2% is recycled and 2% is burned.

It means:

- 2% of SWAP will be added to Liquidity (this contract will exchange 50% of HTP tokens to BNB and add them to our Liquidity).
- 2% is recycled (it will be delivered to official address of Hobbit Pirate project, so we can pay fee for the team, and marketing) because Hobbit Pirate is long-term project.
- 1% is burned.

Therefore, apart from earning token exchange transactions, users can stake their LP tokens and get HTP tokens. Please note that when adding liquidity, users should have adequate amount for each token.

Reward Pool is 3 years period. The reason and purpose why it should be 3 years because we provide assurance that Hobbit Pirate developers will not dump the price of HTP token.

- **APY Farming 5-7 % depending on the pair**

In Hobbit Pirate Farm, there are two pairs, namely HTP/BNB LP HTP/BUSD with APY 5% up to 7% depending on the chosen pairs.

HOBBIT Pirate farm offers users farming opportunity by staking LP tokens and earning HTP in return. We also give fee to the existing liquidity pairs by offering our Liquidity Providers an opportunity to stake their LP tokens.

In addition to transaction fee reward, the users can visit our Farm to stake their LP tokens, and earn HP tokens in return.

- **Staking Rewards APY 12% (staking tokens and NFT to earn HTP tokens)** In

Hobbit Pirate, there are some ways used by the users to earn rewards: staking HTP tokens and staking NFT with APY 12% to earn HTP tokens.

- **Mystery Box**

Users can earn mystery box as rewards by their purchased minting NFT. The Mystery Box they get contains random rewards depend on each user's luck.

- **Lottery**

In Hobbit Pirate, there is also a feature called Lottery where users have opportunity to win lottery prizes in every certain period.

- **Initial Farm Offering**

The Hobbit Pirate was also the runway for the Initial Farm Offering. Initial Farm Offering (IFO) helps DeFi projects to raise capital through farming. features offered by the Hobbit Pirate decentralized exchange.

- **Governance Vote**

HTP can be used to participate in governance votes when a project needs users' votes to determine what they should choose among several options.

# Tokenomics

Name of Token	: Hobbit Pirate
Token Symbol	: HTP
Network	: Binance Smart Contract (BSC)
Decimal	: 18
Total Supply	: 10.000.000.000 HTP
Smart Contract	: 0x1f40E27cB461e740e46363c0DE0CA0d910431A4d

## Allocation

- **Pre Seed – 35%**

Hobbit Pirate held a Pre Seed Sale of 3,500,000,000 HTP or 35% of the total supply.

- **Staking – 10%**

1,000,000,000 HTP is allocated for HTP staking or 10% of the total supply. This amount can be obtained in total by the users who stake on Hobbit Pirate Farm.

- **NFT Reward – 10%**

NFT Reward of allocated HTP is 1,000,000,000 HTP or 10% of the total supply. This amount can be obtained in total by users who stake their NFT collection on the Hobbit Pirate Farm. So that the users NFT collection is not only as a collection but can also gain much benefits.

- **Initial Liquidity – 10%**

1,000,000,000 HTP is allocated for HTP Initial Liquidity or 10% of the total supply.

- **Team – 10 %**

1,000,000,000 HTP or 10% of the total supply will be allocated for the Hobbit Pirate Team. This amount will be locked within 1 year.

- **Marketing and Foundation – 25%**

Moreover, for Marketing and Foundation needs, 2,500,000,000 HTP will be allocated or 25% of the total supply. This amount is for marketing needs as well as the Hobbit Pirate Foundation with the aim of sustaining the Hobbit Pirate ecosystem.

## Ecosystem

Hobbit Pirate with its all products especially IFO launchpad made with the Web3 system will create a separate ecosystem based on BSC network, offer low transaction fee and fast transaction process. All projects that have joined our IFO launchpad will be classified according to their own platform and the investors can easily access to their token sale and products. We also have some plans to support new projects, one of the plans is marketing services.

Hobbit Pirate team will provide an access for project partners to our venture capital partners, with the aim of giving solution for fundraising achievements to project partners.

# Roadmap

## Q3 2022

- Hobbit Pirate development planning
- Making whitepaper
- Designing NFT
- Smartcontract creation and internal testing

## Q4 2022

- Website launch
- Marketing and Partnership
- Application for funds to several venture capital
- Pre seed sale
- LP Pool Installation
- Listing on market centralize
- Stake product launch
- Farm product launch
- New employee recruitment
- First stage token burning (5%)

## Q2 2023

- IFO product launch in Beta Testnet
- Looking for regular investors to join our IFO product
- IFO product launch on Mainnet
- Expand market
- Third stage token burning (5%)

## Q1 2023

- NFT minting (mystery box)
- Swap and LP Pool product launch in Beta Testnet
- NFT giveaway launch
- Partnership supporting Swap and LP Pool products
- Swap and LP Pool product launch on mainnet
- Lottery product launch
- Second stage token burning (5%)
- Buyback tokens from 50% profit on all launched products (per 3 Months)

## Q2 2023

- Sustainable project development

# Hobbit Pirate Development Team

Hobbit Pirate development team has experience in cryptocurrency.

## Additional Information

Hobbit Pirate has been audited by [solidproof.io](#)

Hobbit Pirate also opens up opportunities for collaboration with other parties. To apply for cooperation, you can send an email to the following email: [admin@hobbitpirate.com](mailto:admin@hobbitpirate.com)

Follow Hobbit Pirate's social media accounts below for further development information: [Twitter](#), [Github](#), [Medium](#), [Telegram](#).
